

Keltan[®] 2470L

Product Description

Crystalline ethylene-propylene rubber with medium ENB (ethylidene norbornene) content and a very low Mooney viscosity.

The very low mooney viscosity and very high level of Controlled Long Chain Branching result in excellent processing characteristics especially in low plasticizer and plasticizer-free compounds.

This polymer is ideally suited for use in electrical insulation (medium and high voltage cables), thermoplastic modifications and molded connectors (peroxide cured).

Supply Form

Standard bales.
